TITLE: Spectral characteristic of the luminescence quantum yield of some radiation converters

SOURCE: Zhurnal prikladnoy spektroskopii, v. 5, no. 2, 1966, 265-266

TOPIC TAGS: quantum yield, luminescence, luminescent material, UV radiation, spectrum, excitation spectrum

ABSTRACT: This study was made because the quantum yield for some compounds was never specially investigated and for others it was determined only in a small part of the ultraviolet region of the spectrum. Consequently, the spectral characteristic of the luminescence quantum yield was studied for 2,5-diphenyloxazole, 1,3,5-triphenyl-oxazoline, 1,4-di-[2-(5-phenyloxazoline)]-benzene, and p-terphenyl in the range of 220-340 nm. The samples were dry and in the form of powder. The luminescence quantum yield of the samples was determined by comparison with that of salicylic acid sodium, a compound with a constant quantum yield. The measurement results show that none of the compounds under investigation have a constant luminescence quantum yield in the

Card 1/2

TITLE: A simple method of calibrating a "reduced" light source in the ultra-violet area of the spectrum 21

CITED SOURCE: Zh. prikl. spektroskopii, v. 1, no. 1, 1964, 83-85

TOPIC TAGS: ultraviolet spectroscopy, radiation energy distribution, measurement procedure, photomultiplier

TRANSLATION: The article describes methodology for measuring the distribution of radiation energy from a spectrum of a standard source in UV spectroscopy, using as the radiation pickup an FEU-1S unit characterized by a Poisson distribution of noise pulses. A scintillator from a mixture of polystyrene-terphenyl-ROROR, in optical contact with the photomultiplier (FEU) window, was used as a radiation converter with a constant quantum light yield. Signals at the photomultiplier output were amplified, then subjected to amplitude discrimination and counted. Formulas

AUTHOR: Reznikov, K. Yu.

TITLE: Quantitative method for evaluating the stimulation for multiplication of cortical nerve cells of large hemispheres in rats

SOURCE: AN SSSR. Doklady, v. 164, no. 1, 1965, 187-190 and insert facing page 188

TOPIC TAGS: experiment animal, biologic acceleration effect, brain tissue, cell physiology

ABSTRACT: This study concerns the process of amitotic nerve cell division upon stimulation with biostimulants. Investigations were made with 55 white rats in 5 lots. Lots 1-3 received biostimulant implants into the parietal region of the right hemisphere in the form of pieces or homogenate of rat brain and RNA, while lots 4 and 5 received rat brain and RNA subcutaneously. The animals were sacrificed between 1 and 60 days following operation, the brain was fixated, and about 1000 nerve cells were counted to determine the four stages of amitotic neuron division, from rest to the 2-cellular form. Mathematic processing of the figures showed that the amitotic cell division in lots 4 and 5 had not changed; but that in the other lots showed initially decreased resting cells, then increased cell division from the 5th to the 17th

Card 1/2

I 1956-66

ACC NR: AP5023373

postoperative day. No difference was seen in cell division of the left or right half, although only the right half had received the biostimulants. Both biostimulants and the trauma were considered causative factors. The effect of the biostimulants was similar. The decrease in the number of binuclear cells is specifically discussed to learn whether they divided, degenerated, or became uninuclear. It is concluded that they probably divided, since such cells increased numerically parallel to the increase in the 2-cellular forms. Orig. art. has: 2 tables and 3 figures.

Title : Sagger with Alumina for Flat Porcelain Wares.

Orig Pub: vSb: Kapseli i karkasnyye ognepornyye detali, primenyayemyye
v keram. prom-sti. M., Promstroyizdat, 1956, 57-60.

Abstract: The results of tests of sagger under working conditions at the Dmitrovskiy porcelain factory are related. The composition of the sagger was as follows (in % by weight): fine chamotte to 2 mm - 40, Druzhkovskaya clay - 25, Latnenskaya clay - 15, industrial alumina - 20. Alumina was not burnt additionally. Aluminous sagger are more expensive than chamotte sagger by 13.5%, but they are used 5 times instead of 4 for burning plates; the expenses of buffing soiled products are considerably less.

TITLE:

Single-Stage Burning of Chinaware
(Odnokratnyy obzhig farforovoy posud),

PERIODICAL:

Steklo i keramika, 1959, Nr 3, pp 44-45 (USSR)

ABSTRACT:

Technical porcelain and porcelain sculptures are commonly burned only once, as they possess sufficient strength for glazing when dried. In the Chinese People's Republic all porcelain products are burned once, whereas glazing is done in two processes, i.e. first inside and then outside. In the Khaytinskiy farforovyy zavod (Khaytinskiy Glass Factory) troshkov clay (troshkovskaya glina) is added to the mass, which thus obtains a high mechanical strength and allows glazing in dried state after one single burning. In the Dmitrovskiy farforovyy zavod (Dmitrovskiy Porcelain Factory) lengthy experiments were carried out with a common mass containing 30% of "prosyanovskiy"-type kaolin and 13% of "Druzhkovka"-type clay with a fracture safety of 18 to 20 kg/cm². In this connection it was found that some products stand the glazing process by the immersion method and therefore need

Card 1/2

Single-Stage Burning of Chinaware

SOV/72-50-3-14/19

to be burned only once. At present, about 25% of the factory's furnace volume is thus left free to be used for other products. The processing costs of products burned only once are lower by about 10% as compared to those burned twice.

TITLE: Assembly Line Production in Teapot Molding (Potochnaya liniya formovki chaynikov)

PERIODICAL: Steklo i Keramika, 1958, Nr 2, pp. 30-32 (USSR)

ABSTRACT: Fig. 1 shows the scheme of assembly line production in the molding and preparation of teapots. The assembly line for forming consists of three bands, and on both of its sides six molding machines are arranged (fig. 2). The ready shaped teapots are placed upon the middle band, which has a width of 400 mm, and which moves towards the drying plant. The two lateral bands move in the opposite direction and bring the gypsum molds back. The velocity of the assembly line is 1.6 m per minute. Previous drying of the teapots to 17-18% moisture content is carried out in a drying plant of 11.5 m length at a temperature of from 75-80° at a velocity of 0.528 m per minute and an output of 5000 per shift, which corresponds to the work performed by 5 formers. Previous drying of the teapots in the molds takes 1.75 hours, and molding takes 25 minutes. The teapots knocked out of the molds are conveyed by means of a transversal conveyer band to the conveyer band for finishing, where seams are straightened and holes are drilled into the sieve. This conveyer band has a

Card 1/2

Assembly Line Production in Teapot Molding

72-2-12/20

width of 650 mm and a length of 12 m, and is operated by 12 workers, half of whom are occupied with finishing, the other half with fastening parts; work is carried out in a sitting position. The velocity of the assembly line is 1.65 m per minute, and each working place has a length of 2 m. From here the products are conveyed to the drying plant which is able to hold 5000 teapots. From here they are conveyed by conveyer band to the second floor, where they are finished. Finally, they reach the burning furnace. Formers are paid according to the number of teapots they produce. All products are marked. The introduction of assembly line work resulted in an increase of output of 15% as well as in a considerable reduction of the time needed for molding, which now amounts to 10 hours. There are 3 figures and 1 Slavic reference.

TITLE: Preparation of Scientific Cadres for the Methodical Teaching of Physics (Podgotovka nauchnykh kadrov po metodike fiziki)

PERIODICAL: Fizika v Shkole, 1957, # 6, pp 18 - 23 (USSR)

ABSTRACT: The number of scientific workers in the USSR is at present 240,000, including 10,000 holding a doctor's degree and more than 85,000 holding the degree of Candidate of Sciences. In 1955, the USSR had 11,478 scientific workers in pedagogical sciences. The number of aspirants in all branches of science rose from 21,905 in 1951 to 29,362 in 1956. Out of this, during the same period, the number of aspirants in pedagogical sciences rose from 862 to 1,037.

Much was done for the development of the methodical teaching of physics by A.G. Kalashnikov, full member of the RSFSR Academy of Pedagogical Sciences, and by the associate members of the RSFSR Academy of Pedagogical Sciences, P.A. Znamenskiy, D.D. Galanin, A.V. Peryshkin, B.S. Zvorykin, Professor I.I. Sokolov and others.

The following institutions train aspirants for the methodical teaching of physics: The Moscow State Pedagogical Institute

Card 1/2

47-6-4/37

Preparation of Scientific Cadres for the Methodical Teaching of Physics.

imeni V.I. Lenin, the Moscow City and Oblast' Pedagogical Institutes, the Institute for Methods of Teaching, APN RSFSR, the Leningrad Pedagogical Institute imeni Gertsen, the Kiyev Pedagogical Institute imeni A.M. Gor'kiy and a number of other pedagogical institutes.

The article then describes the various ways and possibilities of training scientific workers to be physics instructors. This training may consist of a 3-year course of instruction or a 4-year correspondence course, a postgraduate course of study for instructors of higher educational institutions and, finally, an examination for a candidate's degree. The article quotes a number of dissertations giving title, author and name of institute.

TITLE: The Educational Film "Nuclear Energy for Peaceful Purposes"
(Uchebnyy kinofil'm "Yadernaya energiya dlya mirnykh tseley")

PERIODICAL: Fizika v shkole, 1959, Nr 2, pp 47-48 (USSR)

ABSTRACT: The Tsentral'naya kinolaboratoriya "Shkolfil'm" Ministerstva
prosveshcheniya RSFSR (Central Film Laboratory "Shkolfil'm"
of the RSFSR Ministry of Education) has issued a documentary
sound-film: "Nuclear Energy for Peaceful Purposes". It is
based on the film "Atomic Energy for Peaceful Purposes" pro-
duced by the Moskovskaya kinostudiya nauchno-populyarnykh
fil'mov (Moscow Film Studio of Scientific-Popular Films).
The author of the script and stage manager is V.L. Zhem-
chuzhnyy, consulting-methodologist - K.F. Lavrovskiy. The
film explains the principles of obtaining nuclear energy
for peaceful purposes, and the application of radioactive
isotopes in science, industry, agriculture and medicine. It
shows technical installations, constructions and processes
in which these isotopes are being used. The first part of
the film explains the principles of operation of a nuclear

TITLE: Foreign Physics Textbooks for Secondary Schools (Zarubezhnyye uchebniki fiziki sredney shkoly)

PERIODICAL: Fizika v shkole, 1959, Nr 2, pp 89-92 (USSR)

ABSTRACT: The authors tell of the contents of physics textbooks used in secondary schools of England, France and the USA. The article analyzes 7 French, 8 English and 2 American textbooks and gives at the same time an idea about the system of the secondary school physics course in each of these countries. In England and France physics is taught for several years, but little significance is attached to it in the USA. It is not an obligatory subject in American schools, and in the 1956/57 school year only 4.5 % of the students of the four senior classes were studying physics. Foreign textbooks lag in furnishing information on the development of the physics of the atom and atomic nucleus. Not only the number of pages used, but also the material chosen is scanty. In the USA, e.g., the production of atomic energy

Card 1/2

Foreign Physics Textbooks for Secondary Schools

SOV/47-59-2-29/31

is taught, rather than the physics of the atom. The authors then deal with the contents and succession of expounding the training material in English textbooks. The article will be continued. There are 11 references, 9 of which are English, 1 American and 1 Soviet.

TITLE: A Study of the Theme "Structure of the Atom" (Izucheniye temy "Stroyeniye atoma") An Aid to Beginning Teachers (V pomoshch' nachinayushchim uchitelyam)

PERIODICAL: Fizika v Shkole, 1958, Nr 2, pp 33-41 (USSR)

ABSTRACT: The author describes a series of eight lessons he elaborated to help beginning teachers explain the structure of the atom to their pupils (senior 10-th class). The series is divided in 4 groups: 1 - the physics of the atom, 2-the physics of the nucleus; 3 - atomic power and 4 - use of radio active isotopes. Two lessons are devoted to each group. The teacher is also advised on experiments to be shown and the questions which will be asked. There are 8 figures and 2 Soviet references.

TITLE:

An All-Russian Conference on Textbooks in Physics (Vserossiyskoye soveshchaniye po uchebnikam fiziki)

PERIODICAL:

Fizika v shkole, 1958, Nr 5, pp 90-95 (USSR)

ABSTRACT:

From 23 to 26 June an All-Russian Conference took place at the RSFSR Ministry of Education which was devoted to the discussion of the composition of an ideal physics textbook. It was attended by a great number of teachers of physics from Moscow, Leningrad and other cities, by workers of pedagogical institutions and the Academy of Pedagogical Sciences. The following reports were heard: "The Place, System and Contents of a Course in Physics at the Secondary School" by V.F. Yuskovich, Head of the Laboratory of Methods in Physics of the Institute of Methods of Instruction, RSFSR Academy of Pedagogical Sciences; "Requirements, a First Grade Physics Textbook Should Meet" by the Docent of the Moscow Oblast Pedagogical Institute S.I. Ivanov; "An Analysis of English, French and US School Physics Textbooks" by L.I. Reznikov, Senior Scientific Worker of the Institute of Methods of Instruction; "An Analysis of Physics Textbooks for Secondary Schools in Czechoslovakia and the German Democratic Republic"

Card 1/2

An All-Russian Conference on Textbooks in Physics

SOV-47-58-5-26/28

by Professor A.G. Kalashnikov, Regular Member of the Academy of Pedagogical Sciences. The Conference participants also heard the report of Professor P.A. Znamenskiy, Member-Correspondent of the Academy of Pedagogical Sciences, on "Requirements, a Second Grade Physics Textbook Should Meet". The ensuing discussions dealt with many questions pertaining to the contents of secondary school physics courses and contained critical remarks on existing textbooks. Special commissions discussed thoroughly the requirements of first and second grade textbooks. Physics textbooks must be composed according to a definite, scientifically-based methodical system. The article quotes the full contents of the requirements as elaborated by the Conference.

BOOK

Call No.: AF561941

Authors: REZNIKOV, L. I. and YUS'KOVICH, V. F.

Full Title: STUDY OF THE SECTION "THE STUDY OF THE ATOM" IN THE SCHOOL
COURSE IN PHYSICS

Transliterated Title: Izucheniye razdela "Stroyeniye atoma" v shkol'nom kurse fiziki

Publishing Data

Originating Agency: Academy of Pedagogical Sciences RSFSR. Institute of
Instruction Methods

Publishing House: Publishing House of the Academy

Date: 1952

No. pp.: 68

No. of copies: 25,000

Editorial Staff

Editor: Peryshkin, A. V., Corr. Mem. of the
Academy of Pedagogical Sciences

Tech. Ed.: None

Editor-in-Chief: None

Appraisers: None

Text Data

Coverage: This is a well planned general program for teachers of physics without giving details. It is interesting in listing the names of numerous Russian scientists and their works. The book gives the scope of this new field in physics as covered in Soviet high schools.

TITLE:

Foreign Physics Textbooks for Secondary Schools

PERIODICAL:

Fizika v shkole, 1959, Nr 3, pp 98-102 (USSR)

ABSTRACT:

This is a continuation of a critical review of English, French and American textbooks used for physics study at secondary schools. The present article concerns mainly French and American textbooks. The reviewed textbooks are: (French) M.Eurin et H. Guimot, Physique, 1952, Classes de Seconde, Classique A et B; M.Eurin et H. Guimot, Physique, 1952, Classes de Première, Classique A et B; M.Rurin, H. Guimot, Physique, 1953, Classe de Mathematique; I. Lamirand et M. Joyal, Physique, IIIeme classe S et M; R. Faucher, Physique, 1954; (American) D.L. Baker, R.B. Brownlee, R.W. Fuller, Elements of Physics,
